PROFESSIONAL SUMMARY

Applied AI Engineer building full-stack applications, retrieval-augmented generation (RAG) systems, and agentic workflows with Python, FastAPI, PostgreSQL/pgvector, and Next.js. Self-directed engineering experience spans semantic retrieval, evidence-backed outputs, API integration, and cloud deployment. Brings 20+ years of operations experience to practical automation and systems design.

TECHNICAL SKILLS

Applied AI: RAG, embeddings, semantic retrieval, structured outputs, multi-agent systems, OpenAI API, Anthropic Claude, Whisper, Model Context Protocol (MCP)

Programming: Python, TypeScript, JavaScript, SQL

Backend & Data: FastAPI, PostgreSQL, pgvector, SQLAlchemy, Pydantic, Alembic, Redis, REST APIs, OAuth 2.0

Frontend: React, Next.js, Tailwind CSS, TanStack Query

DevOps & Testing: Docker, Docker Compose, Git, GitHub Actions, Pytest, Railway

PROFESSIONAL EXPERIENCE

Founder & AI Systems Engineer | Self-Directed Engineering Portfolio

2025–Present

- Build full-stack AI applications and automation systems, owning API design, data models, AI orchestration, frontend delivery, testing, and deployment.
- Apply modular service, repository, dependency-injection, provider-abstraction, and database-migration patterns across Python/FastAPI systems.

FEATURED AI ENGINEERING PROJECTS

JobOps AI | Evidence-Backed RAG & Job Intelligence Platform

Python • FastAPI • PostgreSQL • pgvector • OpenAI • Next.js • Docker • Railway

- Built and deployed a multi-tenant application combining document ingestion, embeddings, semantic retrieval, grounded RAG, and résumé-to-job requirement analysis.
- Designed server-controlled provenance validation requiring AI-generated citations to resolve to application-owned source evidence.
- Implemented requirement-level Supported, Partially Supported, and Not Supported classifications without numeric ATS scores or hiring predictions.
- Enforced tenant-scoped access in SQL; added session/CSRF authentication, Alembic migrations, automated backend tests, and GitHub Actions CI quality gates.
- Deployed a containerized Next.js/FastAPI/PostgreSQL-pgvector architecture on Railway with a public frontend and private backend/database services.

FEATURED AI ENGINEERING PROJECTS CONTINUED

ConversationOS | AI Relationship Intelligence Platform

Python • FastAPI • PostgreSQL • pgvector • Redis • Docker • Next.js • Claude • Whisper

- Built a full-stack platform that transforms unstructured conversations into persistent, searchable client intelligence and structured follow-up context.
- Developed an audio-to-intelligence pipeline using Whisper transcription, Claude memory extraction, client reconciliation, and a React/Next.js dashboard.
- Implemented client profiles with remembered facts, confidence metadata, linked conversation history, and pgvector-powered semantic retrieval.
- Built modular FastAPI services and REST APIs with provider abstractions and Alembic migrations; containerized Next.js, FastAPI, PostgreSQL, and Redis with Docker Compose.

Kevin | Multi-Agent AI Chief of Staff

Python • Anthropic Claude SDK • Gemini • Gmail API • Google Calendar API • OAuth 2.0 • Cron

- Built a modular multi-agent system as the intelligence and coordination layer for Rovana Studio business operations, from research through image-generation workflows.
- Developed specialized agents for creative direction and design specifications, coordinated through a CLI dispatcher and structured JSON handoffs.
- Integrated Gmail and Google Calendar with OAuth 2.0 for scheduled executive briefings, email triage, and contextual draft responses.
- Implemented token refresh/recovery, API retry handling, and scheduled execution.

ADDITIONAL PROFESSIONAL EXPERIENCE

United Parcel Service (UPS)

Package Car Driver | 2014–2026

- Managed time-critical delivery routes, resolved delivery exceptions, and maintained safety, accuracy, and customer service in high-volume logistics operations.

Preloader | 2005–2014

- Sorted and loaded packages by route while maintaining accuracy, safety, and daily load targets in a fast-paced warehouse environment.

EDUCATION AND SELECTED CREDENTIALS

Florida International University | Biomedical Engineering coursework

Microsoft Applied Skills: Create an AI Agent with Microsoft Foundry

Anthropic Academy: Building with the Claude API • Intro to Model Context Protocol (MCP) • Intro to Subagents
